

One switch connects two broadband connections

Overview

At home I have the following setup - a tp-link switch modem connected to the internet and 2 routers (both AX53 3000), connected to that switch. I want to set them up in such a way that both belong to the same network (Wi-Fi SSID too) and both have access to the internet. We have 2 internet connections coming in to our building - neither are great (2 different routers from different providers). Are there technologies in Network Switches to support active switching or load balancing across the two connections?

I know this maybe standard but I am not familiar with the. When configuring the router, I ran into the following problem: I can't define the same default gateway on both interfaces of the router that connect to the switches (as far as i know).

One switch connects two broadband connections

How To Use A Network Switch With 2 Routers
