

# Open-air optical cable

## Overview

---

Aerial fiber optic cables are commonly used in optical communications and are now so common that they can be seen on utility poles all around you. Optical cables for broadcasting and HD TV Cameras Optical cables for sensing and monitoring temperature, vibration or intrusion. In 2022, the Polynesian nation of Tonga began using a Taara free-space laser broadband to connect regions of the island that were inaccessible to fiber-optic lines. Twenty years ago, Web-savvy folks were focused on solving the Internet's "last-mile" problem. Deploying the latest coherent DWDM transmission technology over a Communication Service Provider's (CSPs) optical line system will yield immediate performance, cost, space, and power benefits.
