

Optical Module Barcoding

Overview

Barcode scanner modules are electronic components designed to read and decode barcodes, which are optical representations of data. Whether you are creating a 100-Gbps or 400-Gbps, small form-factor pluggable (SFP) module, SFP+ transceiver, XFP module, CFP, X2/XENPAK module. This system is crucial for converting physical, encoded patterns (like a barcode) into digital. ams OSRAM delivers innovative illumination and sensing solutions that optimize the accuracy, efficiency, and reliability of barcode readers, automatic identification and data capture systems across diverse industries.
