

# **Optical Module Fiber Optic Patch Cord Connector**

## Overview

---

Fibre optic patchcords are single-, dual-, or multifibre data cables that are factory-assembled with the commonly used fibre optic connectors - LC, SC, E-2000, MTP, SN, CS, MDC, etc. As networks move to higher speeds and higher density, choosing the right fiber optic patch cords becomes critical to the reliability of your system. Fiber optic connectors in SFP modules are the physical interfaces that connect the transceiver to fiber patch cables, enabling optical signal transmission between network devices. They do not define speed, distance, or protocol, but they determine how light enters and exits the SFP module and which. This compatibility directly impacts network connection stability, data transmission efficiency, and.
