

# Optical Module Interface Card

## Overview

---

There have been multiple variants of the electrical interface of optical modules that have been used over the years. OIM cards are used to connect the FCC and LCC together in a multishelf system, using a set of 24 optical array cables. LUCID's PCIE-25GETH2-BC RDMA 25GigE NIC is a dual-port 25 Gb/s, PCI-Express Gen3 x8 Network Interface Card that supports both SFP28/SFP+ optical modules and is compatible with 25G 850nm SFP28 Optical Transceiver (PN: OT-SFP28-25G-GL). Often part of a router or switch, these devices need to offer low standby power, PoE, high energy efficiency, and. This module is not supported in V200R001C01, V200R003C02, V200R003C10, or V200R005C01. The ES5D21X02S00 provides two 10GE SFP+ optical ports for data access and line-rate switching.

There have been multiple variants of the electrical interface of optical modules that have been used over the years. The earliest forms of optical modules had an analog NRZ electrical interface. In the transmit direction, the optical module would directly drive the laser or LED with the analog signal coming from the front system card. In the receive direction, the module would directly drive the receive electrical interface with the o
