

Optical cables are present in high-voltage cables

Overview

Fiber optic cables are strands of glass or plastic that transmit data as pulses of light. In a high voltage environment, with typical line voltages of 115 kV or more, requires the evaluation of certain critical parameters. Currently, there are a limited number of industry documents that address the requirements for optical fiber cables near high voltage circuits. In high voltage engineering, ASU optical cable are commonly used for underground installations, providing reliable communication and monitoring of electrical infrastructures. This innovative approach combines the robust electrical conductivity of traditional HV cables with the unparalleled data transmission capabilities of.
