

Power connection location of the construction site distribution box

Overview

The main distribution box shall be located in the area close to the power supply; the distribution box shall be installed in the area with relatively concentrated electrical equipment or load; the distance between the distribution box and the switch box shall not. The power distribution system of the construction site is classified into three levels, and the main distribution board (or distribution room) is set. This applies to tower cranes, lighting, containers, and tools as well as to hydraulic power packs that supply concrete demolition.
