

Relay protection in Europe

Overview

European Standards for Relay Protection are an essential aspect of electrical power network transmission and distribution. These standards provide guidelines and regulations for the design, implementation, and operation of relay protection systems in Europe. These clean energy sources, connected through inverters and flexible transmission systems, are transforming traditional grids based on synchronous generators into more flexible and resilient systems, presenting challenges to system stability. According to Straits Research analysis, the Europe Protective Relay Market was valued at USD 4614. A protective relay is a relay device which is designed to trip a circuit breaker when a fault is detected.
