

# **Requirements for the inlet size of the distribution box**

## Overview

---

The inlet or outlet holes or knockouts shall be located a minimum of three inches from adjacent sidewalls. If the pipe has different diameters, the inlet diameter is the same as last section of it: For the width there is an exception with double outlets: Foundation excavation for the raised DB is 60cm minimum to ensure pipe protection and must be compacted well. Choose the right box based on environment (indoor/outdoor), load capacity, and durability. Ensure safe placement: install in dry, accessible areas with good ventilation and at appropriate height (typically ~1. Concrete Thickness and Reinforcement - A minimum thickness of one and one-half inches shall be used in the construction of distribution box bottoms, sidewalls, and lids; all shall be reinforced by a minimum # 10 gauge six-inch welded steel reinforcing wire or equivalent. The installation requirements and specifications of Distribution box involve many aspects, including site selection, fixing method, wiring specifications and safety protection.
