

# **Risks in Power and Telecommunication Equipment Rooms**

## Overview

---

Base stations, central offices, and server rooms house sensitive equipment under continuous stress. When electrical systems fail or suppression design falls short, fire risk escalates quickly. The telecommunications industry is a vital part of our daily lives, but it comes with its own set of unique health and safety risks. From working at great heights to exposure to electromagnetic fields, these hazards pose a real threat to the health and well-being of telecoms workers. From cellular towers and fiber optic networks to data centers and satellite ground stations, the infrastructure that powers global connectivity is vast, intricate, and under constant pressure to perform.
