

Selection Guide for Upgraded EPON Equipment for Distribution Network Automation

Overview

A comprehensive guide to EPON network planning and deployment, covering network architecture design, OLT and ONU equipment selection, split ratio planning, optical power budget calculation, fiber cabling requirements, deployment steps, and troubleshooting tips. Why Selecting the Best OLT is Critical for Modern ISP Infrastructure The choice of an Optical Line Terminal serves as the cornerstone of any Fiber-to-the-Home (FTTH) or Fiber-to-the-Business (FTTB) deployment. It acts as the service provider endpoint, converting electrical signals used by the ISP's. The PON technology includes: Ethernet PON (EPON), a passive optical network based on Ethernet, is. This paper introduces the basic principle of EPON and discusses the feasibility of EPON applied in distribution automation system from the aspects of transmission ability, reliability, security, expandability and economical efficiency.
