

# **Spacing between temporary distribution boxes**

## Overview

---

The distance between distribution box and switch box shall not exceed 30 meters. Our interpretation letters explain these requirements and how they apply to particular circumstances, but they cannot create additional employer obligations. It is fairly well understood that if an assembly short-circuit current rating above 10,000 amperes is desired, a Power Distribution Block or a Terminal Block with a high short-circuit current rating must be utilized. Energy Safe Victoria has become aware of a trend of non-compliant underground consumer's mains being installed on residential construction sites. These versatile units work great for construction sites, entertainment events, and disaster recovery operations.
