

# **Speed of Telecom Fiber Optic Cable Leased Line**

## Overview

---

A fiber optic leased line can deliver speeds ranging from 10Mbps to 10Gbps or higher. An ONT (Optical Network Terminal) converts optical signals to electrical signals when fibre optic cables are used. In contrast to most fibre broadband connections, subscribers are likely to get a Service Level Agreement guaranteeing performance, faster physical fault fixing and 24/7 support. A Leased Line, also known as a private circuit, is a dedicated telecommunications line that provides a permanent, private connection between two locations.

# Fibre Leased Line VS Fibre Broadband Explained 2022

---

A fibre leased line connects you to the internet service provider's supply point through an underground fibre optic cable. These cables carry data in

## Leased Line VS Broadband

---

Fibre Leased lines can provide symmetrical upload and download speeds of up to 10Gbit/s (that's 10,000Mbit/s!) delivered via a dedicated optical

## Leased Line vs Fibre

---

For many, terms like fibre, Ethernet, and leased line are used interchangeably, yet they represent very different levels of speed, reliability, and service. This guide breaks down what each

## Everything To Know About Leased Lines In India
