

Standard for Level 3 Distribution Boxes in Power Supply Stations

Overview

ISO/IEC TS 22237-3:2018 addresses power supplies to, and power distribution within, data centres based upon the criteria and classifications for "availability", "physical security" and "energy efficiency enablement" within ISO/IEC TS 22237-1. IEC (the International Electrotechnical organizations, governmental committees activity. ISO and IEC established technical committees or non-governmental, collaborate organization with Standards bodies technical in in of mutual ISO particular IEC, also. Hierarchical and Branch Circuit Distribution (1) Power distribution from the primary main distribution board (distribution cabinet) to secondary distribution boards can be branched; that is, one main distribution board may supply. Power Distribution Equipment is a term generally used to describe any apparatus used for the generation, transmission, distribution, or control of electrical energy. The complete set of products can form a complete three-level protection system for construction electricity, achieving the goal of one machine, one switch, and one protection, which is very suitable for various standard engineering applications.
