

Standard for the frequency of electrical distribution box inspection

Overview

The SFG20 44-07 standard requires specific 6-monthly checks that include visual inspections for physical damage, verification of proper labelling, checking protective devices, identifying overheating issues, and ensuring overall functionality of distribution boards. The table below provides guidance on the frequency of formal inspections of electrical installations as well as routine checks. National Fire Protection Association (NFPA) standards are typically updated within annual cycles, with review by committee members representing. Subsequent intervals will be recommended by the competent person carrying out the inspection and. NOTE: Maintenance should only be carried out by a qualified Maintenance Contractor, following all standard safety process and procedures such as isolating power supplies, using a tag in and tag out system and displaying correct safety signage.
