

# **Stripping of 24-core indoor flexible optical cable**

## Overview

---

In this informative guide, we'll walk you through the step-by-step process of stripping and preparing fibre optic cable for termination, covering techniques, tools, and best practices to help you achieve successful terminations in your fibre optic installations. In this instructional video, Bob Licari, Test Equipment Product Manager, demonstrates a simple way to strip optical fiber. Marcel Buijs, EMEA Business Development, Technical Sales, Fiber Optic Center, Inc. Properly stripping the cable and preparing the fibre ends ensures a clean and secure connection, leading to optimal signal transmission and network performance. In this lesson, we will identify and examine cables, then prepare them for splicing or termination by stripping the cable to expose the coated fibers. Whether it is indoor or outdoor fiber-optic (FO) cable, using a step-by-step approach reduces the chance of fiber damage while ensuring the performance of fibers. Step 1: Mark the armor (if the cable has armor) with the tip of your knife to note a length sufficient to expose the cable's ripcord, being careful not to go through the armor and cut the ripcords.
