

The distribution box is blocking the cabinet door

Overview

Check the electrical load and ensure that the sensors do not exceed the 10 Amp maximum. Here's why it matters: Static discharge: Metal doors can build up static charge, especially in high-voltage environments. The following are important characteristics of electrical cabinets: The purpose of electrical cabinets is to shield potentially damaging elements of the environment, such as moisture, dust, and even direct human contact, from sensitive electrical equipment. Here are some solutions when a power distribution box fails: Safety First: Make sure you are safe. Do not touch live parts, turn off the corresponding power switch to avoid the risk of electric shock.
