Overview

A terminal block box, also known as a junction box or distribution box, is a closed or semi-closed enclosure that contains terminal blocks (usually in the form of screw-type, spring-type or peel-free type). The range of applications extends from pure energy distribution in buildings to building automation and through to industrial plants. Wieland is your experienced and reliable partner for efficient, pluggable and decentralized electrical installation. It typically features a metal strip or bar that connects wires via one or more screw terminals. The terminal blocks are all equipped with Weidmüller's self-locking and maintenance-free clamping yoke technology.
