

The fiber optic router is lit up but cannot connect to the internet

Overview

If your router isn't connecting to the internet, here's the quick checklist: Check and secure all cables. Make sure that the wire plugged into the router has an active internet connection. It can be frustrating to find out that your internet connection has stopped working or is having a problem connecting to the router. This morning my ISP upgraded my Internet connection from a standard coaxial cable and Cisco modem to a fiber optic cable and Hitron modem Model Name NOVA-2004. This connected but no internet error means your device has successfully authenticated with your router and received an IP address, but it cannot reach anything beyond your local network. The problem affects Windows PCs, Macs, iPhones, Android phones, and every other WiFi device equally.
