

The function of fiber optic stripping hot stripping pliers

Overview

Fiber thermal strippers are essential tools used in the field of fiber optics for removing the protective coatings from optical fibers. These coatings, which are typically made of polymer materials, need to be carefully removed before splicing or terminating the fiber to ensure. Also known as optical fiber cable strippers, they hold cable within a slot, squeeze their jaws to press through the coating, and slide the coating off the end of the cable.
