

The optical module s receiver and transmitter were inserted incorrectly

Overview

If it is not a Huawei-certified optical module, replace it with a Huawei-certified optical module. Customers in the use of optical modules will more or less encounter a variety of failure problems, such as optical module model selection is correct, the use of jumper is correct and some common problems, customers have the ability to judge and have a clear solution, but for some of the use of. They convert electrical signals to optical signals for transmission over fiber optic cables and then back to electrical signals at the receiving end.

The FOA Reference For Fiber Optics

The light from the transmitter is coupled into the fiber with a connector and is transmitted through the fiber optic cable plant. The light from the end of the fiber

istack fault on S6700 due to optical module mismatch

1) check if the module is certified by Huawei 2) Attach same optical module (same transceiver) for port grouped by 4.

The connections run in a ring from transmitter to receiver etc. In combination with the integrated switch of the modules, they allow to build up redundant connections.

Checking Whether the Fiber or Optical Module Is Properly Inserted

The optical module or optical fiber is inserted properly when you hear a clack. After the optical fiber or optical module is properly inserted, run the port-alarm clear command to clear the alarm.
