

The role of waterproofing in pigtail fiber

Overview

The Waterproof fiber pigtail is made of rugged fiber connectors and has a stainless steel reinforced waterproof device and armored outdoor PE jacket. So it can protect the cable from twisting, pressure, or damage by mouse bites. They offer a reliable and durable solution for data transmission in areas prone to moisture, dust, or extreme temperatures. 5m to 2m—that has a factory-terminated connector on one end and bare fiber on the other end. The connector end plugs directly into active equipment, an ODF port, or a fiber splice tray, while the bare fiber end creates a low-loss permanent joint with the incoming cable. Waterproof Pigtails are engineered for outdoor, harsh-environment, and industrial applications requiring weather-resistant fiber termination.
