

Tracking Module Installation Method

Overview

TL;DR: Installing a hardwired GPS tracker involves connecting three wires: a constant 12V power (red), an ignition-switched wire (white), and a ground (black). Success hinges on proper wire identification, secure "poke and wrap" connections, and placing the device with a clear. Concealed placement under dashboards or inside panels prevents tampering and improves theft deterrence. A GPS tracker, or Global Positioning System device, uses satellite signals to pinpoint locations with remarkable accuracy. The patent-pending Urchin Traffic Monitor (UTM) available in Urchin 4 was specifically designed to provide the most accurate measurements of unique website visitors. For businesses looking to get a deeper understanding of their online visitor behavior, the UTM is an extremely valuable technology. 06 Kill switch GPS trackers let you remotely disable a stolen or misused vehicle from anywhere instantly.
