Overview

, bridges, tunnels), energy infrastructure, and smart grids—places where failure isn't an option. Fiber optics aren't just fast—they're flexible, safe, and surprisingly tough. Fiber cables come in two main types: Single-Mode Fiber: Designed for long-distance data transmission with minimal signal loss. Since that time, these ingenious cables have found their way into thousands, if not millions, of applications. Fiber optics have revolutionized the technology of nearly countless industries since Donald Keck and Peter Schultz working at Corning applied for a patent, titled "Method of producing optical wave guide fibers," in May 1970.
