

# **What fiber optic cable bandwidth is generally suitable for using a router**

## Overview

---

The best fiber optic cables can carry up to 60 terabits of information every second. It offers high bandwidth, low signal loss, and resistance to electromagnetic interference (EMI), making it ideal for modern high-speed networks. 7 petabits per second, it is important to understand bandwidth capabilities is important for. The choice between SMF and MMF depends largely on your application and the required transmission distance.
