

What is a combined distribution box

Overview

A Photovoltaic (PV) distribution box, often called a PV combiner box, is a critical component in any solar power system. It ensures safe power management and includes protective elements such as circuit breakers or fuses to guard against overloads. Well, this nifty little device is a crucial hub where power from various sources converges before it's distributed to different circuits. Think of it as the traffic cop of electrical systems, ensuring everything runs smoothly! At first glance, a Combined Distribution Box might look like just. Our DC combiner boxes offer users the possibility to integrate short-circuit and overvoltage protection, as well string monitoring solutions (I, V, T and SPD and switch isolator status), for PV systems using central inverters with PV panels in trackers and fix tilt systems.
