

What is a relay protection control box

Overview

A relay protection control device plays an important role in monitoring and detecting faults or abnormal conditions in the current, voltage and power flow in an electrical circuit. Long term cost reduction (TCO) for trainings and maintenance by reduce variety of relays A fast and selective arc fault mitigation for air-insulated LV & MV switchgear and Relion protection and control relays and sensor. They are used effectively in the following applications: This equipment is ideal for both newly constructed. Restricted earth fault relay is used for protection of an earth fault for the restricted zone as per your requirement but mainly is used for ground fault in transformer HT side.
