

What is an MPO branch optical cable

Overview

An MPO breakout cable, often referred to as a harness or fan-out cable, bridges the gap between parallel optics and serial optics. At one end, it features a high-density MPO connector (typically Base-8, Base-12, or Base-24). The MPO breakout cable—a hybrid assembly that transitions a single multi-fiber MPO connector into multiple discrete duplex connectors (such as LC, SN, or MDC)—has become critical for port-bifurcation and density optimization. MPO stands for "multi-fiber push-on," which refers to the type of connector used in the cable. It is widely used in the telecommunications industry, data centers, computer networks, and other applications that require a.
