

Where is om3 fiber optic cable used in a home

Overview

Typically, OM3 fiber is used for 10G Ethernet and can make connections up to 220 meters long. Most multimode fiber types used today are OM3/OM4 and OM5, but there are still older network infrastructures, where cables inside buildings were laid a long time ago that use OM1, OM2 multimode fiber. " A key feature of multimode fiber is that it has a larger core (the glass part in the middle) than other types. This larger core allows easier light injection and lower-cost optical sources (LEDs and VCSELs), making multimode fiber the cost-effective choice for. Multimode fiber allows light to travel in multiple paths — or modes — through the fiber core.
