

# **Which port to check via MAC address on the access switch**

## Overview

---

Now, log onto the Access switch and do a "show mac-address-table" command for the MAC address and that should show the interface to which it is connected. Now, log onto the Access switch and do a "show mac-address-table" command for the MAC address and that should show the interface to which it is connected. To find the MAC Address on a Cisco switch port, we use the command show mac-address-table. At times, network and IT admins are faced with the challenge to find out which device is connected to which port of the catalyst Switch or. Can someone show me the commands to find a mac-address on a switch and if I know the port I am looking to find it on, also how i find the IP address on that port 06-07-2016 09:05 AM 06-07-2016 09:05 AM 06-07-2016 09:23 AM you don't need layer 3 device, will work fine on layer 2 switch as long ip &. If you have an IP address on hand quickly ping and check if the device is pingable. If yes, then simply logon to one of your core switches or routers and do a simple sh ip arp Core1# sh ip arp 192. Next you can have to make a Telnet session to the Switch to list all Mac Addresses I use the famous PuTTY to connect the switch using Telnet Use these commands to list the Mac Addresses for a HP -.
