

Will the fiber optic cable be twisted off

Overview

Unlike conventional copper wire, a cut fiber cable cannot simply be twisted or crimped back together. If the fiber isn't cut but damaged, then the bad section is removed and the remaining fiber must be carefully spliced. This damage can take several forms, including micro-bending, macro-bending, and stress-induced attenuation. The minimum bend radius is the smallest allowable radius for a given fiber optic cable to be bent around.
